DWA_04.3 Knowledge Check_DWA4

---

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

-Use object destructuring when accessing and using multiple properties of an object.
It uses less repetition and you are less prone to making errors when accessing a specific item in the object. It also saves you a bit more time because you can just access the item without having to constantly reference it first.

-Place 1 space before the leading brace.
It allows you to see where the object begins and allows you to properly see what is happening inside the bracket

-Set off operators with spaces.
Allows you to see the operation of the operator clearly and allows the reader to see clearly what should happen .

---

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.
-Use object destructuring for multiple return values, not array destructuring.
I don't quite understand the example they used and what they mean

-Never use eval() on a string
How does it open up too many vulnerabilities? How does it affect the string

-Use object method shorthand
I don't understand it. Why is it important? What is its purpose?

_____
